

Paul:

As the designer of the boat, Daniel is I consider in a good position to analytically derive VCG. As he also notes, IMS stability data does not include volume above the sheerline. I am prepared therefore to accept Daniel's stability analysis and to issue the certificate for NINJOD in the configuration that you request, ie with water ballast limited to 290 kg, with AVS of 123.32 and STIX of 32. In doing so, I note that Daniel's analysis shows that both FIR and FKR satisfy the Appendix K requirements for Category 0.

The certificate will be forwarded to you shortly.

Mike Urwin
Technical Director, RORC Rating Office
